▪ **Read the passage. Then choose the correct answer.**

[12-15]

It's hard to see the shape of the earth. The ground looks flat, and it feels flat. For a long time, people thought the earth really was flat.

Around 500 BCE, Pythagoras looked at the moon. He saw that it is round. He thought the earth must be round, too.

In 350 BCE, Aristotle tracked the stars. They showed that the earth is round. Later, scientists proved this is true.

[16-19]

People like looking at the moon. In the past, people did it, too. They wondered what the moon is made of. Some people guessed, "Green cheese!"

In 1969, people landed on the moon. The moon moves around the earth. The moon is big, but it's smaller than the earth. It's about 384,400 km away.

We still have questions about the moon. But we know some things. For example, it's made of rock, not green cheese!
